

next time you're going over a certain time you could see you can just say or somebody as well so that's why what the system does beyond beyond what's expected yeah so now okay so it looks like a bunch of stuff was deducted this is awesome okay whole page of words that's awesome and then these are the keywords use and presentation interesting something difficult it's good right you mentioned like we were talking about the presentation of how things are difficult to do in our project we don't know what is impressive and we talking about about the transcripts it's nice that presentation I would appear when towards the end but filler words always used a lot and hear all the things awesome awesome yeah we could actually find potentially show such a thing in our demo would like we could show this in our demo does like since we're speaking before they don't really know if I demo actually produce this life and it's difficult to do a live demo that produces this back after writing this we have some idea of what I think what it does well or things that we should show during the demo so like showcasing as we go over transcript you should 20 this is good this is good this is good and we can actually use it demo to use it to Showcase what is done well and just let give a list of data data data afterwards and so I think the order of things in our reservation is probably going to be like a 15-second of what it does jumping right into the devil while describing what it does well and then going back to how it works and finally noting the limitations and interesting very unusual okay does that seem fine because we actually I don't need to include this so we just going to include intro demo plus what works well which we already have a list and then we will have something on the how it works and then we will have limitations + future work + limitations + interesting interesting failure and Future Okay so I guess what remains to be exactly decided is just what the demo is going to be I would argue that the demo can be followed in the in the world works well section if you can just flash some images of report from Tim Urban does that sound okay dogs and stuff like that okay so yeah I like that idea and so maybe I can move myself now and spend a little bit of time just going over the gay stuff I think the gays ding fixing is like a lower priority of mine the higher priority of mine is using the CLA should be a high priority right because we need to show it running it's not an actual interaction that you would not had on his own card right so it's in no way would I can do is I can like once we have the final version of the report generation we can run it again Honda audiophile actually save that audio file to my computer so now that we have is not getting over it and I save that to my computer as I hopefully save it is a nice name please tell me I saved it I definitely saved it features that way if so we can actually run or final transcript recording on this beforehand and then we can talk and we can act as though we actually were discussing the key features of garbage which I don't think it's dishonest because one for the purposes of our demo it is impossible to actually say the stuff that is going to be in the presentation and yeah so I think it's not as if we have if we just pretend to do this garbage key features wave again and then show them where does it live we can just tell them that this is a real example of input it's not happening life because we can't speak for 10 minutes at you to show people that this is the actual input I guess what time we meeting tonight you can just keep speaking to my thing as if it's reporting you and then we can see if it recorded you who you can talk to it someone needs to read Explorer
